## Step 1

First, I would like to say thanks again to gray, iProof, dinopio, lazyc0der, anonymous, the dev team, nightwatch, and everyone who donated. Without them, there would be no unlock today, and I surely wouldn't be up at 8AM.

Second, you may brick your iPhone using this tutorial. YOU ARE WARNED.

Okay on to the actual step. Remove the black part, the three screws, and the aluminum case. Disconnect the wire connecting the phone to the case. Do not remove anything else. Comment on these posts if you are with me so far. Once we get a good number of comments I'll move on.
